
IBM File Manager DB2 Feature Mentor Workshop

Overview:

Learn to use File Manager to edit, view, and manage DB2 tables and data. An experienced IBM consultant will provide in-depth lecture and lead discussion. Hands-on lab exercises may be done to gain experience using the File Manager DB2 feature on your system.

Skills Taught:

- Understand the functions and utilities provided by the File Manager DB2 feature
- Edit and browse DB2 tables
- Use templates to control row selection and formatting
- Use the online and batch utility functions for DB2 object management and data manipulation

Course Outline:

- Introduction to the File Manager DB2 feature
- Using the table editor and viewer
- Using templates to select rows and format the display in the editor and viewer
- SQL Execution and Prototyping
- Working with File Manager DB2 feature utilities:
 - Print utility
 - Create and drop objects utility
 - Copy utility
 - Object list utility
 - Import and export utilities
 - DB2 Utility Job generation
- File Manager / DB2 Options
- Using the Eclipse interface
 - Setting up connections and credentials for the Eclipse plug-in
 - Using the Fault Analyzer Eclipse plug-in to access DB2 objects

Training duration:

4 hours

Prerequisites:

- To get the most from this workshop, the student should:
- Be familiar with TSO and ISPF

- Understand basic DB2 concepts
- Have experience using data editors
- Know how to modify JCL, submit a batch job, and view its output
